

Creating a New PDB from PDB\$SEED

PDB\$SEED is a template, by using the template a new PDB will be created.

- The container database should contain one root container. It should also contain the SEED database. Now, we can create a pluggable database from the SEED pluggable database. We do this by using create pluggable database statement.
- We should do this from `cdb$root`

Prechecks:

→ To verify the existing PDB's

```
SQL> select PDB_ID, PDB_NAME, STATUS, CON_ID, CREATION_TIME from cdb_pdbs;
```

PDB_ID	PDB_NAME	STATUS	CON_ID	CREATION_TIME
3	PDB	NORMAL	3	25-JUL-23
2	PDB\$SEED	NORMAL	2	25-JUL-23

Step 1: Check the location of the CRD files that will also have the PDBSEED, usually it will be located under oradata mount point.

```
[oracle@oraclelab1 ~]$ cd /u02/app/oracle/oradata/TESTDB/
```

```
[oracle@oraclelab1 TESTDB]$ ls -l
```

```
total 2578004
-rw-r-----. 1 oracle oinstall 18726912 Aug 29 19:15 control01.ctl
drwxr-x---. 2 oracle oinstall   104 Jul 25 21:34 pdb
drwxr-x---. 2 oracle oinstall  4096 Jul 25 21:09 pdbseed ← This is the pdbseed
-rw-r-----. 1 oracle oinstall 209715712 Aug 27 13:37 redo01.log
-rw-r-----. 1 oracle oinstall 723525632 Aug 29 19:10 sysaux01.dbf
-rw-r-----. 1 oracle oinstall 954212352 Aug 29 19:11 system01.dbf
```

Step 2: Create a directory with the new PDB name at the same location that we are creating using PDBSEED

```
[oracle@oraclelab1 TESTDB]$ mkdir pdb
```

```
[oracle@oraclelab1 TESTDB]$ ls -l
```

```
total 2578004
drwxr-x---. 2 oracle oinstall    104 Jul 25 21:34 pdb
drwxr-xr-x. 2 oracle oinstall    6 Aug 29 19:25 pdb1 ← pdb1 is new empty directory
drwxr-x---. 2 oracle oinstall   4096 Jul 25 21:09 pdbseed
```

Step 3: Now connect to sql plus and create new pdb from root container

```
[oracle@oraclelab1 TESTDB]$ sqlplus / as sysdba
```

```
SQL*Plus: Release 19.0.0.0.0 - Production on Tue Aug 29 19:57:59 2023

Connected to:
Oracle Database 19c Enterprise Edition Release 19.0.0.0.0 - Production
Version 19.3.0.0.0
```

```
SQL> show con_name
```

```
CON_NAME
-----
CDB$ROOT
```

```
SQL> create pluggable database pdb1 admin user pdb1admin identified by pdb1admin
file_name_convert=('/u02/app/oracle/oradata/TESTDB/pdbseed/', '/u02/app/oracle/oradata/TESTDB/pdb1');
```

```
Pluggable database created.
```

Step 4: Validate the newly created PDB

```
SQL> select PDB_ID, PDB_NAME, STATUS, CON_ID, CREATION_TIME from cdb_pdbs;
```

PDB_ID	PDB_NAME	STATUS	CON_ID	CREATION_TIME
3	PDB	NORMAL	3	25-JUL-23
2	PDB\$SEED	NORMAL	2	25-JUL-23
4	PDB1	NEW	4	29-AUG-23

```
SQL> show pdbs
```

CON_ID	CON_NAME	OPEN MODE	RESTRICTED
2	PDB\$SEED	READ ONLY	NO
3	PDB	READ WRITE	NO
4	PDB1	MOUNTED	

```
SQL> alter pluggable database pdb1 open;
```

Pluggable database altered.

```
SQL> show pdbs;
```

CON_ID	CON_NAME	OPEN MODE	RESTRICTED
2	PDB\$SEED	READ ONLY	NO
3	PDB	READ WRITE	NO
4	PDB1	READ WRITE	NO

```
SQL> alter session set container =pdb1;
```

Session altered.

```
SQL> show pdbs
```

CON_ID	CON_NAME	OPEN MODE	RESTRICTED
4	PDB1	READ WRITE	NO
